### **DETAILED ACTION**

#### **Restriction Requirement Applicable to All Groups:**

1. Claim 41 is drawn to a set of amplification primers for use in amplifying. Claims 42-46 depend from Claim 41 are directed to methods. Therefore, it is unclear whether Claim 41 is intended to recite a method or Claims 42-46 are intended to be directed to amplification primers.
  
2. The claims are drawn to probes (Claims 1-18, 47-49) of SEQ ID NO 1-4, 45-68; probe mixes (Claims 19-22) comprising a probe from (SEQ ID NO: 1-4) and a helper probe (SEQ ID NO: 21-28); amplification primers of SEQ ID NO: 45-68 (Claims 23-40); sets of primers from SEQ ID NO: 45-68; methods of detecting *C. parvum* in a sample, using probes of SEQ ID NO: 1-4, using primers of SEQ ID NO: 45-68; and kits (Claims 74-) comprising either two or three primers from SEQ ID NO: 1-4, and SEQ ID NO: 45-68.

3. Applicants are required to select one combination for examination. Thus, applicants must select a single probe for search of Claims 1-22, 34-36; must further select a single helper probe for Claims 23-33; must select a single target sequence for on the primers for Claims 45-52; and finally a single combination of oligonucleotides which includes the oligonucleotides previously selected.

The claims contains 68 individual, independent and distinct nucleotide sequences in alternative form. Accordingly, these claims are subject to restriction under 35 U.S.C. 121 as outlined in 1192 O.G. 68 (November 19, 1996).

Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequences are presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.

Should applicant traverse on the ground that the nucleic acids are not patentably distinct, applicant should submit evident or identify such evidence now of record showing the species to be obvious variant or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other inventions.

It is noted that the claims will only be examined to the extent that they read upon the restricted nucleic acids. Furthermore, this is NOT an election of species. It is deemed that each of the distinct nucleic acids, SEQ ID NO:s, are patentably distinct from one another. Applicant's are requested to provide the claims which are deemed to read on the elected sequence.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
